

The solution for long-term HVDC reliability Sediver® High Resistivity glass insulators

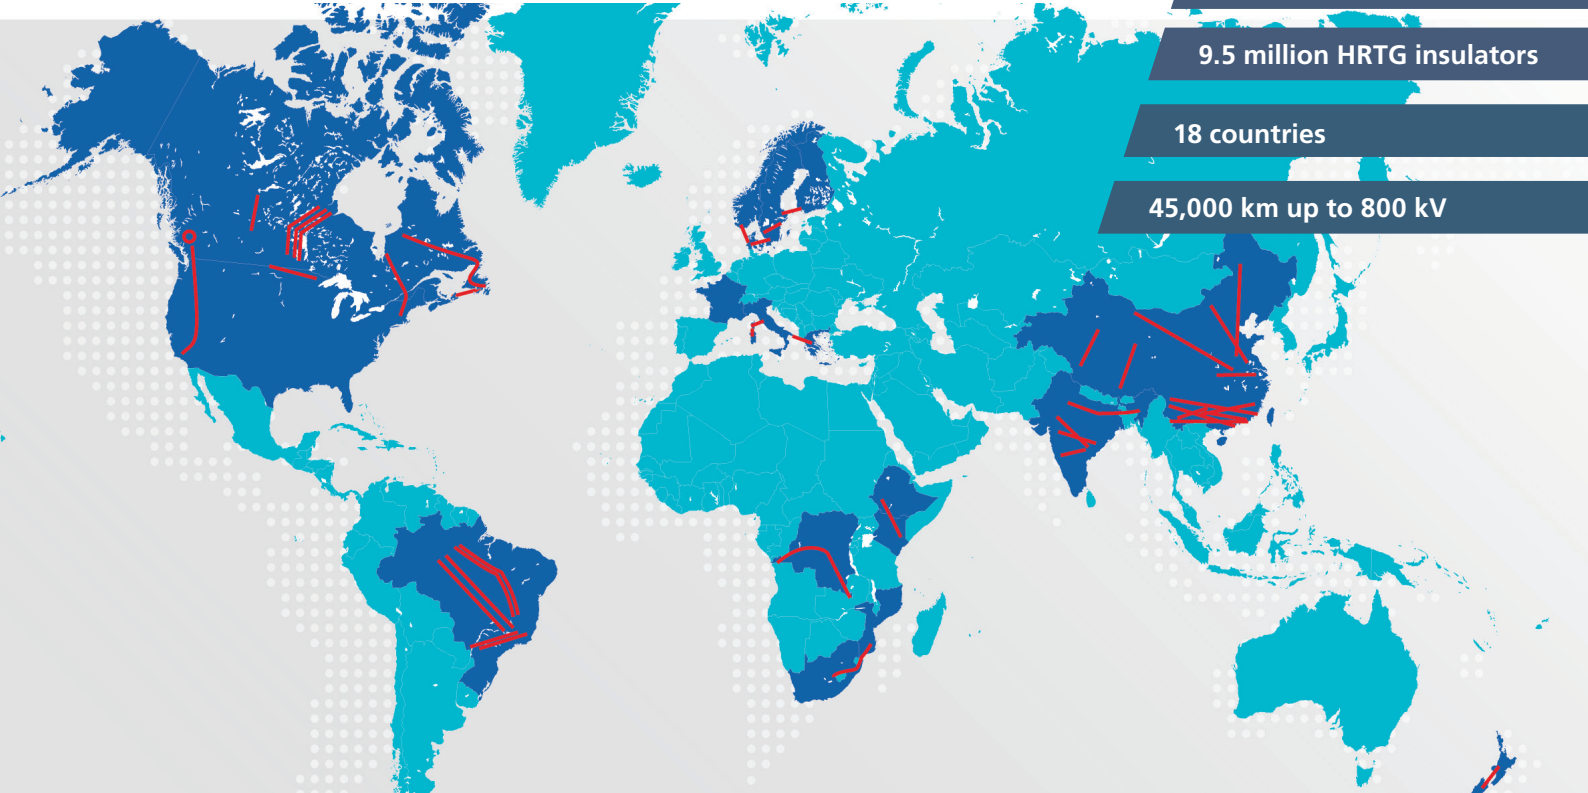

Unmatched global experience since 1965

50 years in operation

9.5 million HRTG insulators

18 countries

45,000 km up to 800 kV

Sediver, the pioneer in HVDC insulation technology

Unidirectional current creates stresses requiring specially-designed insulators that resist ionic corrosion, pollution accumulation and other DC-related phenomena.

Our exclusive technical solutions

- **Proprietary HRTG glass composition:** high resistance to localized ionic flow & thermal stresses
- **Optimized glass shell design:** with increased leakage distance for enhanced pollution performance
- **Metal fittings protection** of the cap and pin: to prevent corrosion

**Sediver, the technical partner
for your challenging projects**

SEDIVER
